**General Contractor:** Turner Construction Company  
**Construction Square Footage:** 970,000 Sq Ft  
**Project Manager:** Dave Harrison  
**Location:** New Albany, Ohio  
**Duration:** 2 Years

NAO Facebook Data Center is an ongoing project located in New Albany, Ohio. This state of the art facility features 8 data halls, mechanical penthouses, and administrative areas which make up the 1,000,000 square foot facility. Due to the availability of renewable energy sources in the area, New Albany became an attractive location for the data center. The data center is situated on a 345-acre site. Once the project is completed in 2019, there will be 100 permanent employees.

On a project like this, the electrical distribution system is nothing short of extravagant. This facility contains nearly 60,000 light fixtures, millions of feet of wire and conduit, hundreds of pieces of distribution equipment, and thousands of data racks. The entire data center is powered from a renewable energy source. A typical contractor may be overwhelmed by the size and involvement of this project, but we thrive on a challenge which brings good experience to the team. A job like shows the dedicated workmanship and that there is no such thing as a job too big for us.
